

NARESH BANDARU

DevOps Engineer | Cloud & Kubernetes | CI/CD & Automation
Hyderabad, India | +91 80960 13989 | naresh309bandaru@gmail.com | linkedin.com/in/bnaresh404

PROFESSIONAL SUMMARY

DevOps Engineer with 3.8 years of experience building and operating CI/CD pipelines, Kubernetes platforms, and cloud infrastructure for banking and enterprise workloads on AWS and Azure. Hands-on with Terraform, Jenkins, GitHub Actions, Docker, Helm, and observability stacks (Prometheus, Grafana, ELK). Focused on automation, deployment reliability, and shift-left security.

TECHNICAL SKILLS

Cloud Platforms	AWS (EC2, EKS, ECS, IAM, S3, CloudWatch), Azure (AKS, AZ-104 services)
Containers & Orchestration	Docker, Kubernetes (EKS, AKS), Helm, multi-stage builds
CI/CD & Automation	Jenkins, GitHub Actions, GitLab CI, Salesforce SFDX pipelines
Infrastructure as Code	Terraform, Ansible
Observability	Prometheus, Grafana, ELK Stack, AWS CloudWatch
Security & Quality	SonarQube, Trivy, HashiCorp Vault
Scripting & OS	Bash, Python, Linux administration
Source & Tools	Git, GitHub, GitLab, Jira, ServiceNow

PROFESSIONAL EXPERIENCE

System Engineer — Infosys <i>Banking domain Hyderabad, India</i>	<i>May 2022 – Jan 2026</i>
- Designed and maintained CI/CD pipelines across Jenkins and GitHub Actions for multi-cloud (AWS & Azure) banking applications, reducing average deployment lead time and enabling multiple deploys per day. - Built and operated containerized workloads on Amazon EKS and Azure AKS using Helm charts, deployment health probes, and rolling update strategies to sustain high availability for production banking services. - Optimized Docker images using multi-stage builds and minimal base images, cutting image size by ~60% and shortening pull/start times in Kubernetes deployments. - Provisioned and managed AWS and Azure infrastructure as code with Terraform, replacing manual console-driven changes with version-controlled, reviewable modules. - Integrated SonarQube and Trivy into CI pipelines to enforce static code analysis and container image scanning, blocking high/critical vulnerabilities before production releases. - Owned Salesforce CI/CD using SFDX — automated metadata deployments, environment promotions, and rollback workflows, improving release predictability for the Salesforce team. - Configured Prometheus and Grafana dashboards plus AWS CloudWatch alerts for application and infrastructure metrics, giving on-call engineers earlier signals and faster triage. - Set up centralized logging with the ELK stack for microservices, standardizing log shipping and search to accelerate root-cause analysis during production incidents. - Automated PostgreSQL schema migrations and rollback steps inside deployment pipelines, reducing failed releases tied to database changes. - Used HashiCorp Vault for secrets management in pipelines, eliminating plaintext credentials in Jenkinsfiles and Git repositories.	

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104) — Oct 2025
- AWS Certified Cloud Practitioner (CLF-C02) — Sep 2023

EDUCATION

B.Tech, Mechanical Engineering — Narasaraopet Institute of Technology	<i>Narasaraopet, AP</i>
